

Wellhead Protection Area Road Signs

Wellhead protection road signs are an inexpensive way to reach a wide variety of people in your community. Signs posted at intersections and close to the Wellhead Protection Area (WHPA) give people the chance to physically see the area that is being managed and let them know that the area is important to the safety of their drinking water.

We suggest stating on the sign, or on a smaller sign under the main sign, a statement that will help people understand what "Wellhead Protection Area" really means. Good examples include, "Protecting your Drinking Water" or "Protecting (*community's name*) Drinking Water." The average cost of printing and installing a sign ranges from \$40.00 to \$70.00 per sign. The cost decreases as more signs are purchased.

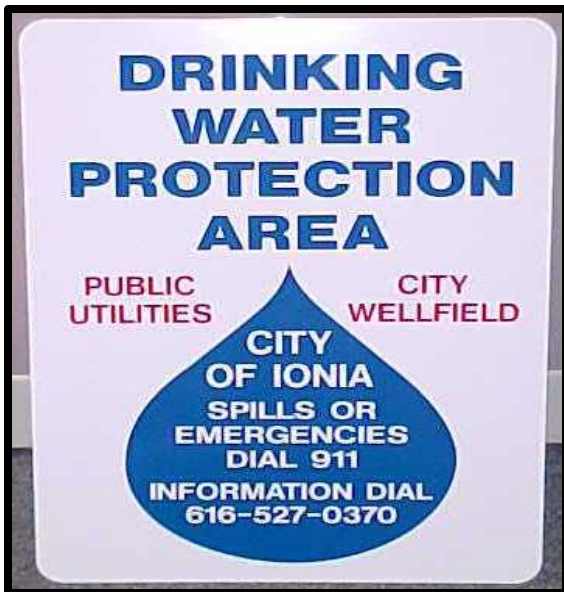

WHPA road signs are a great educational tool and can reach a large audience with little cost and time invested.
